

Age of Aquarius Found

As the culmination of decades of ongoing historical, archeoastronomical, and astronomical research into the origins of the zodiacal ages by a dedicated international team of amateur scientific researchers and an astrologer, located from England to Hawaii, the Aquarian Age Network is pleased to report positive results.

From the infinity of space and eternity of time, researchers have found the only possible logical zero point for an astronomical calendar right where clues from cuneiform writings on ancient clay tablets led them.

These results were made possible only by space-age computer simulations and internet communications and data transfer; they were corroborated by multiple independent astronomical software applications incorporating the latest astronomical theories.

Containing very recent astronomical findings gleaned only in the waning weeks before the spring equinox, the Aquarian Age network proclaimed the following declaration to the world following the ringing of the bells at the moment of the spring equinox at St. Francis National Shrine in San Francisco. The declaration was subsequently video taped at KMTV studios in Mountain View CA along with a panel discussion for a local weekly TV show.

L-R Aquarian-Age Network members Lance Carter, George Flory, & Steve Durst declare the arrival of the Age of Aquarius on the steps of St. Francis National Shrine San Francisco, CA, 20 March 0735 GMT.

Unanimous Declaration of the Aquarian Age Network

While acknowledging the zero point of the zodiac to be defined as the point where the true galactic equator crosses the ecliptic between *Taurus* and *Gemini*, and recognizing the J2000 galactic equator defined by the galactic north pole of 12h 51.4m, 27° 8' to be representative of the B1950 definition of the galactic coordinate system, by virtue of *Sagittarius A** being recognized as the dynamical center of the galaxy with the true galactic equator passing through *Sagittarius A**, and by virtue of the sun being at 90° 00' 32" past the point of the crossing of the J2000 galactic equator and the ecliptic at the spring equinox of 20 March 2000, 0735 GMT, we declare the Age of *Aquarius* to have unequivocally arrived.

Pax Aetatis Aquarii vobiscum!
